

Remote Infrastructure Services

Server Management

RIS's team will monitor key components and the utilization of system resources, including server availability, utilization rate, performance and configuration. Our specialist administrators also work in real time to ensure effective functioning of your servers and to prevent any problems from occurring, which could interrupt server operations.

Network Management & Monitoring

RIS delivers a scalable, high performance and strong enterprise wide networks by designing, managing performance and capacity for applications and by troubleshooting most of the complex issues. RIS network engineers will monitor your network infrastructure 24x7, ensure that your network functions at its optimum level and that effective performance & capacity planning practices are in place.

IT Security Management

RIS helps clients protect business data and processing systems from loss and damage due to computer security breaches. For this, we use proactive as well as reactive methods / processes defined.

Storage Management & Monitoring

RIS has strong capabilities in managing very large, complex SAN environments. RIS engineers will monitor SAN availability, utilization rate, performance and configuration on a 24x7 basis to ensure that your valuable

data is stored securely and can be provisioned in case of routine need as well as disaster.
